The Blaxit Decision Engine (BDE v.3) — White Paper

Oct 30, 2026

A Data-Driven, Anti-Bias Framework for Engineering Safer, Freer Global Futures for the Black Diaspora

By Lisa B. Lee, Expatriation Architect and Founder of Blaxit Forward

Executive Summary

Traditional relocation tools, cost-of-living calculators and international rankings are built on data that reflects Western, Euro-centric values. They often ignore, or distort, the lived realities of Black expatriates. As more Black Americans, especially retirees, look for safer, freer and more affordable lives abroad, that gap matters more than ever.

The Blaxit Decision Engine (BDE v.3) is a proprietary, anti-bias assessment and country-ranking engine built specifically for the global Black experience. It scores about 120 countries on what actually matters to us, then ranks them around each client's own answers.

It blends quantitative analysis, weighted priorities and lived diaspora insight to produce personalized, evidence-based country recommendations. This white paper explains the problem the BDE was built to solve, the principles behind it and how it works.

Who Is This White Paper For?

- Black American retirees considering a long-term or permanent move abroad
- Black Americans nearing retirement who want to plan a move before they need it
- Diaspora professionals and entrepreneurs looking for a stable, affordable base abroad
- Advisors, community leaders and relocation strategists who serve the Black diaspora

The Problem: Euro-Centric Data Creates Euro-Centric Outcomes

Traditional ranking systems rely on:

- Western-centric definitions of "quality of life"
- Safety indicators that mostly measure what would make a white traveler feel safe
- Economic measures that ignore racialized access
- Travel heuristics built around wealthy tourists

- Government reporting with wildly uneven transparency

For the Black diaspora, these tools don't just miss the mark. They mislead.

Key failures of traditional systems

- Safety scores ignore anti-Black racism and police violence.
- Cost-of-living tools don't separate what's affordable for locals from what's affordable for immigrants.
- Expat indexes center the needs of white Western retirees.
- Livability rankings often erase Black communities entirely.

We saw this bias in our own data. When the BDE was first run on standard data sources, its Top 10 was made up entirely of wealthy Western nations. Once the anti-bias corrections were applied, places like Barbados, Turks and Caicos and the U.S. Virgin Islands entered the Top 10. Same countries. The difference was whose reality the scoring reflected.

The BDE v.3 Solution: A System Built for Us, Not Around Us

The BDE answers one core question: where can a Black person live well, live safely and breathe more freely? To do that, it brings together three things:

1. Anti-bias weighting
2. Diaspora-centered, lived-experience insight
3. Personalized priority mapping for each client

1. The Priorities Questionnaire

Each client completes an in-depth, six-section questionnaire. It captures what matters to them, their hard deal-breakers, practical logistics (who is coming along, pets, income, accessibility needs, languages, past experience abroad) and, finally, the things no spreadsheet can measure. It covers areas like:

- Safety concerns and racial climate comfort
- Healthcare access
- Climate preferences
- Cost of living and budget
- Visa and retirement feasibility
- Language comfort
- LGBTQ+ considerations
- Diet and lifestyle

- Deal-breakers

This is not a "fun online quiz." It is a diagnostic intake, similar in depth to what a professional strategist would use.

2. The Anti-Bias Weighting Engine

At the heart of the BDE is a weighted scoring map that corrects for Euro-centric bias and amplifies the measures that matter most to Black expatriates. For example:

- Safety is judged as racialized safety, not generic crime rates.
- A country's safety and healthcare scores count for less when its racial climate is poor, because those scores were measured for someone else.
- Three dedicated bias measures look at Structural Inequality, Current Social Volatility and Immigration Policy Stability.
- Diaspora presence carries real weight, to reduce cultural isolation.
- Climate risk lowers a country's rank as danger rises.
- LGBTQ+ protections and women's safety always carry weight.
- Deal-breakers remove a country from consideration entirely.

3. Multi-Source Data

The BDE draws on:

- Global safety indices
- Climate risk data
- Healthcare access and quality reports
- Transparency International's Corruption Perceptions Index
- Housing and affordability data
- Country-specific immigration and visa frameworks
- Diaspora population data
- Lisa B. Lee's own years of living abroad as a Black American woman

Sources are cross-checked against each other to catch misleading or skewed results.

4. The Country Matrix

About 120 countries, chosen for their interest to Black expatriates, are scored across more than 20 dimensions, including:

- Black safety and racial climate
- Physical safety

- Legal equality and personal freedom
- LGBTQ+ protections
- Cost of living
- Healthcare quality
- Infrastructure
- Government stability and corruption
- Visa ease
- Language ease
- Climate resilience and average temperature
- Diaspora presence
- Distance from the U.S.

The engine produces both a numeric score and a written assessment for each country.

5. The Personalized Top Countries Report

Clients receive:

- Their top 10 countries, ranked by fit
- A 100-point index showing how the countries compare
- An explanation of each factor and how it shaped the score
- Diaspora insights and strategic notes
- A professional summary of recommendations

This report becomes the foundation for the Blaxit Blueprint.

Why the BDE Matters for Black Expats

- **It removes the guesswork.** Clients no longer rely on Facebook group opinions or vacation memories.
- **It removes the bias.** Every measure is recalibrated to reflect Black reality.
- **It personalizes the path.** It surfaces countries that truly match a person's safety needs, identity, budget, goals and deal-breakers.
- **It values lived experience.** Real stories matter as much as spreadsheets.
- **It is protective by design.** Nothing in the system is neutral. It is built to uplift, protect and empower.
- **It makes global options feel possible.** For many clients, their BDE results are their first moment of real clarity.

What This Is Not

- Not a generic "Top 10 Countries" list
- Not an AI-generated ranking
- Not a one-size-fits-all recommendation engine
- Not built around tourists or white Western expat norms

What's Next for the BDE

The next step is a BDE web app on BlaxitForward.com, so people can explore their options directly. Future versions are planned to add:

- An interactive, client-facing dashboard
- Global diaspora mapping
- Safety trend tracking over time
- Regional cultural integration resources
- Short country "micro-reports"

The vision is bold because the mission is urgent.

Conclusion

The Blaxit Decision Engine represents a shift in how Black Americans, and the wider African diaspora, make life-changing decisions about where to live.

It is not simply a ranking tool. It is a culturally informed, data-driven method built specifically for the Black diaspora, from the ground up.

With the BDE, Black people finally have a system that sees us, protects us and helps us move forward: boldly, intentionally and powerfully.

Lisa B. Lee is an Expatriation Architect living in Madagascar. She moved abroad alone after 60 and specializes in data-driven, culturally responsive relocation planning for the global Black diaspora.
